

Introduction to Web Programming
Final Project Article

Teacher: DR. LECTURER MEMBER NEGAR ZAKERI

Student Name: Abdulsamet

Student Surname: Öztürk

Student ID: 20202022019

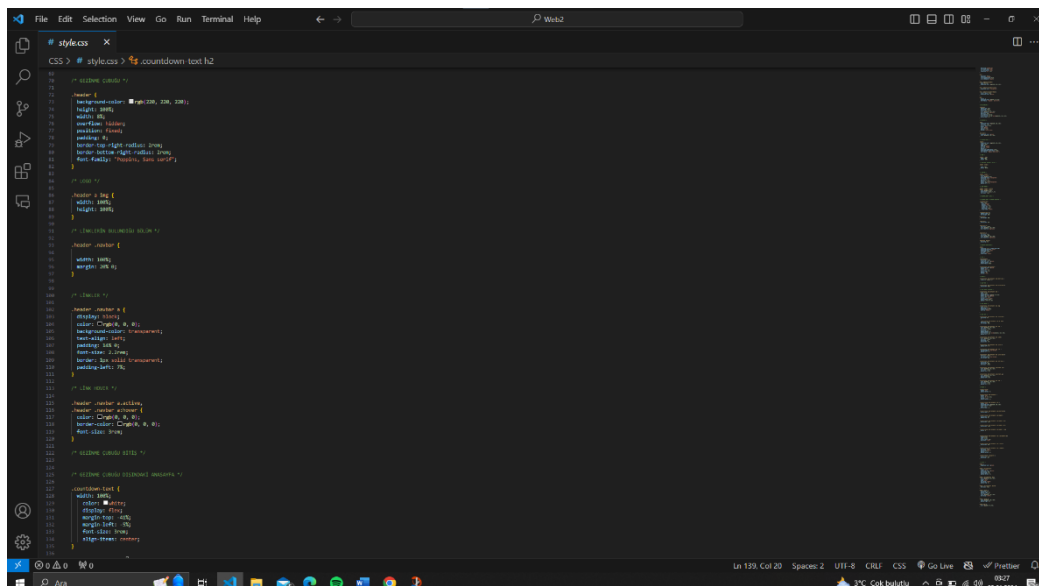

Student Department: Software Engineering

Purpose and Subject of the Project

First of all, I didn't have much difficulty in choosing the subject of the project because I had done a project similar to this one before, but it was not as detailed and meticulous as this one. I was interested in cars, so I aimed to correct the shortcomings of the website I had previously created. In addition to this purpose, I wanted the company to provide a useful service to people.

After determining the topic, I obtained the necessary resources as a result of my research and made the resources I determined ready. I updated all the images I would use, made sure they were in appropriate sizes for the site, and used them ready to be displayed in the best possible quality. The next step was to create a unique logo for myself and tweak it. In this way, I wanted to show people that it is a unique website. I made updates so that people could comment on my project and keep the satisfaction rate high. By using the transition functions and animation features I used, I wanted people to interact with the website without getting bored. Since I wanted it to be a meticulous project, I wanted to do my job completely while creating an advanced website and fill it with real information instead of ready-made codes. I tried to provide accurate information to people.

Finally, while doing this in the design part, I tried to blend black and white tones as the main color. Because I thought it gave a softer and more aesthetic appearance in prominent user interface parts such as background color, navbar color, font and color. I also needed to find ideas that would attract the attention of people using the site, and I tried to create a whole with the photographs I selected. Considering that the tone of colors and general design were up-to-date, I achieved harmony with the visuals and used our slogan as a theme.

HOMEPAGE COUNTDOWN JS:

```
JavaScript > # countdown.js > ...
1 const countdown = setInterval(function () {
2   const timeleft = new Date(2024, 1, 1) - new Date();
3
4   if (timeleft <= 0) {
5     clearInterval(countdown);
6     document.getElementById("countdown").innerHTML =
7       "Campaign is Finished";
8   } else {
9     const days = Math.floor(timeleft / (1000 * 60 * 60 * 24));
10    const hours = Math.floor(
11      (timeleft % (1000 * 60 * 60 * 24)) / (1000 * 60 * 60)
12    );
13    const minutes = Math.floor(
14      (timeleft % (1000 * 60 * 60)) / (1000 * 60)
15    );
16    const seconds = Math.floor((timeleft % (1000 * 60)) / 1000);
17
18    document.getElementById(
19      "countdown"
20    ).innerHTML = `${days} days ${hours} hours ${minutes} minutes ${seconds} seconds`;
21  }
22 }, 1000);
```
